IDEA #6

Prospair

"Prospair is a digital internship platform that matches small and medium-sized companies (SMEs) with talented university students and recents graduates based on their internship goals throughout Europe. Our main interest is to challenge the way the current internship portals work by designing advanced and customisable search engine tools that could help candidates and SMEs reach the most relevant internship and candidate profiles out of a database of tens of thousand of candidates and companies within Europe. By using Prospair, candidates and companies can specify the right companies and people that suit one's internship goals."

Needed competences:
• business developer
• IT specialist
• Back-end developer
• Marketing specialist
